Windows Lite –SasNet User Manual

Info:

The Windows Operating system is good, but it requiers lots of attention.

That's the reason we created this project. SasNet Windows Lite it's a project that started in 2009 with the thought of having the perfect windows, without having to add any microsoft software A clean operating system, fast and already optimized, ideal for any home user without extra big expectations.

In 2012 I launched the first Windows version for the public and my idea was very well welcomed and appreciated, You have to be aware of the fact that a Windows Lite doesn't have all of the Original Windows functions. It only has the basic functions.

I recommend reading everything it includes/ it lacks before downloading. If you are the type of user that likes having all those useless functions, this windows is NOT for you.

These are some of the Windows Lite strong points:

-Fast-
-Clean-
-Fast install-
-Already configured-
-100% legal-
-No hidden Updates-
-Compatible with any PC-
-No traffic monitorization by Microsoft-
-Many Others-

Thanks for use a SasNet Lite Windows.
Please do not download anywhere else because they are fake, scam or malware!

FAQ:

1) Who is this operating system dedicated to?
For anyone who's using it for the following purposes: Office, Multimedia, Gaming, Videochat, Video Editing, Video Rendering, etc.

2) Is this operating system activated? Is It Legal?
Yes because it's not pre-activated. It is 100% legal because it was downloaded from the Microsoft website and it is not activated.

3) Is this iso image bootable?
Yes, it's bootable. You need just a usb flash drive and rufus or ventoy.

4) Many things that I need have been removed, what can I do?
Install the Original version or order a custom iso from us!

5) Does this operating system also work on tablets?
Each version has a changelog, some versions come with this function activated, others not.

6) Why are the updates is deleted?
Windows 10/11, as you already know, has a stupid update system in silence. This system lowers the performance of your pc.

7) Which systems are dedicated to this operating system?
Any system, Low End and/or High End.

8) What are the minimum requirements to run this operating system decently?
SasNet recommends minimal dual core 2.4Ghz and 2GB Ram for a decent run.

9) Why were the app store and xbox app removed?
They were removed because it eats a lot of resources and uses a lot of services.

10) Why was windows photo viewer deleted?
It is an outdated software with fewer options. I recommend irfan view or xnview.

11) I want to play games in the app store. What should I do?
You need to install the original version or order a custom iso with Store from us!

12) Does this operating system have bugs?
Of course, any software and games have bugs. Some are smaller, some are larger.

13) Why does SasNet bring out a new version every few months?
Because a windows lite can not be fully updated. That's why SasNet makes a new version every 8-12 months.

14) Can I update this version?
No, Windows update is deleted.

15) Is Windows Lite UEFI friendly?
Of course, please use rufus or ventoy to put the iso on a flash drive.

16) Can a product already purchased be refunded?
YES! Only if you have paid and still have not received the product, you can request a refund with a simple email to contact@sasnet.ovh. If you have already received the product by email, the refund cannot be made.

17) Do Windows Lite operating systems have protection?
Windows Lite has no protection, we think that Windows Security (Defender) is outdated and eats up a lot of resources for nothing. We recommend a free or paid real-time antivirus.

18) What is so special about Windows Lite SasNet?
We are the only seriously active project from 2009 until now, we offer premium products and technical support on many social media platforms, free of charge.

19) Where can I get free technical support?
You can contact us on Discord, Telegram, Twitter

20) Having problems with the Webcam or Bluetooth?
Open Start
Search for Command Prompt, right-click on the top result and select the Run as administrator option.
Type the following command to repair Windows system files and press Enter: sfc /scannow
After it finishes, restart the system!
And be sure that bluetooth services are enabled.

21) Can I test these operating systems in VMware?
YES! But we always recommend virtualbox. To run these OS in VMware, you need to make a setting.
Go to the current machine press 'Edit virtual machine settings', go to the tab 'Options', click 'Advanced' at the bottom, and change the 'Firmware type' to BIOS.

22) I want UEFI but I don't want to use Rufus. How do I proceed?
To use native UEFI, you must unzip the .iso image with winrar or 7zip and create a folder called "iso" and drop the files there.
Download from _here_ "uefi files" for the correct version (x64 only) and drop the files into the folder called "iso".
Recompile the iso image with poweriso, daemontools, imgburn or nero.
